

(C++) Computer Programming

Tutorial - 1

1. Write a C++ program to input a number and check whether it is divisible by 2, 3, and 5. Display the appropriate message.

```
#include <iostream>
using namespace std;

int main()
{
    int num;

    cout << "Enter an integer:-";
    cin >> num;

    if (num % 2 == 0)
    {
        cout << num << " is divisible by 2." << endl;
    }
    else
    {
        cout << num << " is not divisible by 2." << endl;
    }

    if (num % 3 == 0)
    {
        cout << num << " is divisible by 3." << endl;
    }
    else
    {
        cout << num << " is not divisible by 3." << endl;
    }

    if (num % 5 == 0)
    {
        cout << num << " is divisible by 5." << endl;
    }
    else
    {
        cout << num << " is not divisible by 5." << endl;
    }

    return 0;
}
```

2. Write a program to input a five-digit number and find the sum of its digits.
3. Write a program to input three numbers and find the largest and the smallest number.
4. Write a program to input the marks of a student and display the grade according to the following criteria:

- Marks ≥ 90 : Grade A
- Marks ≥ 75 : Grade B
- Marks ≥ 50 : Grade C
- Marks < 50 : Fail

5. Write a program that takes a six-digit number from the user and then prints the number with its digits reversed.
6. If cost price and selling price of an item is input through the keyboard, write a program to determine whether the seller has made profit or incurred loss. Also determine how much profit he made or loss he incurred.
